

Totally Apple, Totally Restaurant

1

2

1. ISISPOS is a true Apple Xcode application designed and built to operate wirelessly as a native application on your iPad or iPod Touch.
2. From a back office level, ISISPOS offers a unique enterprise service-oriented architecture that allows users a truly anyplace, anywhere, anytime environment.

Apple POS for Restaurants

Introducing a new way to build relationships. It's a new type of restaurant Point of Sale concept called ISISPOS and it changes the way restaurant owners, managers, front-of-the-house staff and back-of-the-house staff all interact with customers, each other, and their restaurant software.

Just think. Your guests walk in, and they'll be greeted by staff with iPads. From swiping credit cards to capturing a signature to suggestions of wines and talking up upcoming events, ISISPOS delivers on all fronts with an iPad POS system for restaurants that is completely mobile and offers the restaurateur a unique tool set and a truly mobile experience that is easy to use, reliable and affordable.

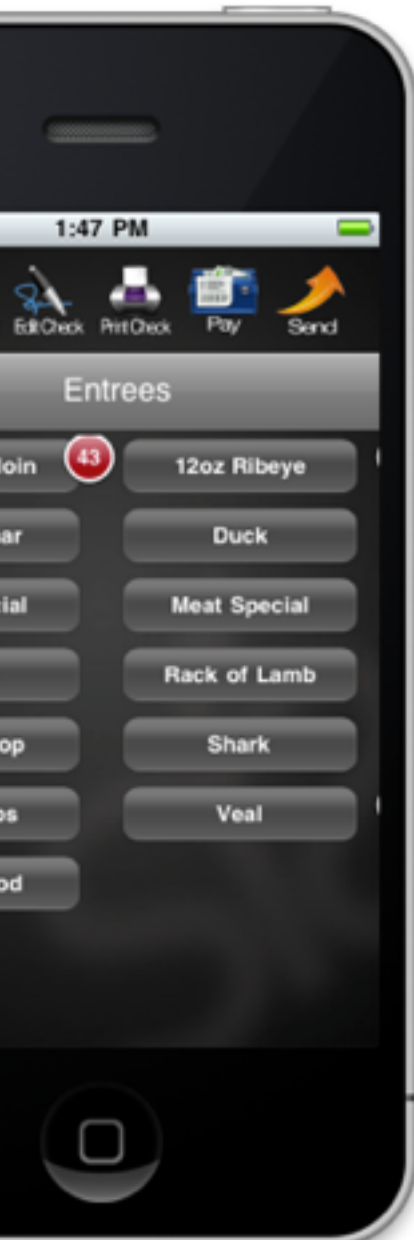

At ISISPOS our vision is all about 'touch,' meaning the ability to interact with the guest on all levels. From headquarters to individual properties throughout the world, ISISPOS is changing the way restaurateurs do business. With easy to use features like suggestive pairing, item favorites, event and package coupons. ISISPOS is taking orders and it's all on

iPad. Our customers are showing their guests how to get to theaters, shows and other points of interests. If a guest wants to see what a specific dish looks like they simply touch the items and the use iPad. From writing up notes during a meeting to automatically making a PDF, and emailing it, the iPad has already become part and parcel of the way we do business.

For the IT staff, supporting the iPad has been a straightforward process requiring no formal user training. Customers simply enter their account information and immediately begin using the device. Get instant synchronization without any IT involvement. It's fast, it's secure, and it's easy to use.

A new way to take orders table side

Cloud computing

Cloud computing platforms are based on subscription pricing. This approach is a major departure from the traditional IT procurement process. With subscription-based pricing, no capital expenses are required to kick off projects. Companies can start small, with virtually no up-front costs, and instantly scale to meet broader business needs. The ability to pay-as-you-go is expensed as a service or operating expense rather than a capital expense. This difference makes it a compelling option for CFOs who are intensely focused on financial predictability and project accountability.

Pay-as-you-go model

The pay-as-you-go model minimizes both project and financial risk because organizations can scale the project based on business results and also ensure that vendors are held accountable over the project's lifetime. There are no large up-front investments that lock a project into a specific technology. That means CFOs can account for the business value generated by the service during the same financial period as costs are incurred. In other words, cloud computing provides a better way for IT departments and CFOs to match investments in a project with business value or return.

There is little risk and minimal up-front costs

Because there is little risk and no up-front costs, cloud computing helps hospitality companies attain better technology despite reduced capital budgets. And because charges from technology vendors usually go in the column of business expenses rather than capital expenses, hotels can invest in cloud-based projects even when IT budgets are slashed.

1. ISISPOS is totally wireless, therefore no wiring is required.
2. ISISPOS is powered by two of the biggest names in business. . . Apple and Amazon!
3. ISISPOS is truly enterprise and a multi-unit solution
4. ISISPOS upfront cost is a fraction of "traditional" POS.
5. ISISPOS does NOT use a back office, but rather cloud computing. Providing a no downtime environment.
