

Spa Cover Lifts

Spa covers help keep your hot water warm and clean. But they can be awkward to remove, and over time as they absorb steam they get extremely heavy!

There are several types of cover lifts or caddies designed to solve this problem.

Cover Classic – mounts to bottom edge of spa with screws.

Cover Companion – mounts to the spa cabinet.

Cover Caddy – No mounting or screws. Weight of spa holds lift in place. Spa must be empty to install.
