Winter Stresses on Trees & Shrubs

Heavy snow and ice, as well as frozen soil conditions, can damage cherished trees and shrubs in residential landscapes. Even areas without major snowfall experience high winds and huge fluctuations in temperatures during winter. But homeowners can lessen the adverse effects of winter weather with preventive maintenance.

What can happen in winter, and how you can avoid it?

"Branches of trees can break due to the excessive weight of ice or snow," says Tchukki Andersen, BCMA, CTSP* and staff arborist with the Tree Care Industry Association (TCIA). "Proper pruning encourages the formation of the strongest possible branches and branch attachments. When pruning alone isn't enough, properly installed cables and rigid braces can add support to a weakened part of the tree."

Winter winds cause evergreens to lose moisture from their needles. Even some deciduous trees suffer from winter drying. If water is not available as moisture is drawn from living cells, permanent damage will result. The best prevention consists of planting only hardy species in areas of prolonged exposure, watering plants adequately in the fall, and mulching to insulate the soil and roots from severe cold. On sunny days in winter, the tree's trunk and main limbs can warm to 15 degrees higher than the air temperature. As soon as the sun's rays stop reaching the stem when the sun sets, the tree's temperature plummets, causing injury or permanent damage to the bark.

The two common types of injury are sun scald and frost cracking. The effects of sun scald and frost cracking can be reduced by sound arboricultural practices to maintain overall health, and by covering the trunks of young, susceptible trees with a suitable tree wrap.

Winter is a good time to prune

"Most skilled arborists prefer pruning when trees are dormant," says Andersen. "With no leaves on the tree, the arborist is better able to evaluate its architecture and spot dead or diseased branches. In addition, since the ground is frozen, damage to the turf underneath the tree due to falling limbs and tree care activities is negligible. This is also a good time to check trees for diseases and other damage."

Here are some other things TCIA recommends to improve the health of your living landscape:

- Aeration in thawed soil around trees helps improve water and air movement in the soil. This strengthens the tree's root system and reduces soil compaction.
- When planting, choose hardy trees available in your area as they have better chances for survival in severe weather conditions. Choosing the best location and following proper planting procedures should be your highest priorities.
- Stop fertilizing trees in early fall to allow them to prepare for winter.
- In case of moderate storm damage, restoring the tree to its former health and beauty may take some time, but it generally can make a full recovery. Broken, hazardous limbs should be removed immediately. Pruning to remove broken stubs and restore the balance of the crown can be put off a little while, but shouldn't be delayed more than one growing season.

What can you do?

The best advice is to hire a tree care professional with the experience, expertise and equipment to safely take down, prune or otherwise care for damaged trees. Contact the Tree Care Industry Association, a public and professional resource on trees and arboriculture since 1938. It has more than 2,200 member companies who recognize stringent safety and performance standards and who are required to carry liability insurance. TCIA has the nation's only Accreditation program that helps consumers find tree care companies that have been inspect-

ed and accredited based on: adherence to industry standards for quality and safety; maintenance of trained, professional staff; and dedication to ethics and quality in business practices. An easy way to find a tree care service provider in your area is to use the "Locate Your Local TCIA Member Companies" program. You can use this service by calling 1-800-733-2622 or by doing a ZIP Code search on www.treecaretips.org.
