

Airbrush Tanning

Electric Paradise now offers airbrush tanning, the latest form of sunless tanning! Airbrush tanning has been around for a few years but was mostly offered on the Hollywood scene. Celebrities such as Britney Spears, Jennifer Anniston, and Eva Longoria use this tanning method.

Airbrush tanning is an alternative to tanning beds. It is a great tanning method for people with sensitive skin or who have a hard time developing a tan. One airbrush session is the equivalent of approximately 6 tanning sessions. The active ingredient in the sunless formula is Dihydroxyacetone (DHA). This is a harmless chemical, that when applied to the skin produces a tan without causing any damage to the skin. The results will last about 6 - 8 days. Please allow at least 5 days between sessions. The process takes about 15 - 20 minutes and another 5 - 10 minutes for drying.

You will notice results immediately because of the cosmetic bronzer. During the next few hours the active ingredient (DHA) will start absorbing. The color will continue to darken over the next 24 hours. Allow about 6 hours before showering for the full bronzing effect.

Preparing for Your Airbrush Session

- ✓ Exfoliate your entire body the night before. This will remove dead skin and promote even coverage. (Ask an employee about our Salt Scrub if you do not have an exfoliant.)
- ✓ Do any waxing or shaving the day before the appointment.
- ✓ Shower before your appointment.
- ✓ Do not use any moisturizers, deodorant, make-up or perfumes before your airbrush session as they act as a barrier to the solution.
- ✓ Wear loose, dark clothing.

Our Prices

- 1 Session \$35
- 1 Session w. 5 minutes in stand-up \$40
- 10 Sessions \$300
- 10 Sessions w. 5 minutes in stand-up \$350

What to expect during Your Airbrush Session

You will be given privacy to undress. What you wear or do not wear is your choice. The choice depends on your comfort level. Be sure to remove any jewelry. The initial spray will be a pH neutralizer which helps to achieve an even tan. Next a moisturizer will be applied to the palms of your hands, and the bottom of your feet as these areas do not tan well - the moisturizer will block the solution from absorbing. The session will take about 15 - 20 minutes. Afterwards you may want to tan in a standup for 5 minutes; this will speed up the drying process and also add extra color. You are also welcome to dry in the airbrush room for 5 - 10 minutes. Loose, dark clothes should be worn after your session, tight fitted clothing will rub the solution off. The solution may rub off onto your clothing but will come off in the wash.

Maintaining Your Airbrush Session

- ✓ Wait to do any activities that will cause sweating such as going to the gym until after your first shower.
- ✓ Wait about 6 hours before showering. When you do shower you will see the cosmetic bronzer washing off revealing your own bronze tan that has developed.
- ✓ Apply moisturizer often. Try to use prescription grade lotions such as Lubriderm or Aveeno or ask our employees about our Body Butter for Body & Face.
- ✓ Swimming pools, hot tubs, or long hot showers shorten the longevity of your tan.
- ✓ Do not use bar soap. Use a moisturizing body wash. (Such as our Hydrating Shower Gel).
- ✓ We recommend our Amber Sun collection for the best results with your airbrush session. Consult with an employee about our Salt Scrub, Moisturizing Body Scrub, Hydrating Shower Gel, Body Butter, & Moisturizer with Color (for touch-ups).
