Sustainable High Strength Wastewater Treatment System Guaranteed FOG and BOD₅ Reductions

The NIBBLER® SBP™ product line was developed for systems having greater than 2.43 pounds per day BOD₅. System configurations incorporate a surge tank to capture peak flows. This allows the NIBBLER® and disposal system to be reduced in size as they are designed based on average daily flow. The treatment process is guaranteed to reduce high strength waste to a residential equivalent BOD₅ < 150 mg/L and FOG < 25 mg/L.

Typical NIBBLER® SBP™ Sites Are:

Mini Marts having food preparation,
Deli's, Restaurants, Fast Food Chains,
Supermarkets, Bakeries, Golf Courses,
Resorts, Truck Stops, Camps, Ski Resorts
Espresso Shops, Strip Malls, etc.
