Firm History and Description

Moore Archeological Consulting, Inc., (MAC) is a veteran-owned small business enterprise (SBE) specializing in independent archeological consulting. Based in Houston, Texas, and founded in 1982, MAC offers its clients comprehensive services in the area of Cultural Resource Management (CRM) as required by State and Federal law to determine if construction projects will adversely affect significant archeological and/or historical sites that are eligible for inclusion in the National Register of Historic Places (NRHP) and/or for listing as a State Antiquities Landmark (SAL). If adverse effects to such properties cannot be avoided, MAC has experience implementing standard and alternative, or creative, mitigation strategies.

As a certified SBE by both the Metropolitan Transit Authority of Houston and Harris County and the Port of Houston, MAC possesses special expertise in completing archeological investigations in urban contexts by combining extensive experience in archeology with a business-like approach to the problems and objectives of CRM consulting.

Services Offered

MAC is familiar with the requirements for the successful fulfillment of Federal and State archeological compliance requirements and has a well-established working relationship with the Galveston District, US Army Corps of Engineers, and the Archeology Division of the Texas Historical Commission. MAC is also equipped to provide the necessary range of cultural resource services to satisfy Section 106 of the National Historic Preservation Act (NHPA), the Texas Antiquities Code, Federal Environmental Assessment and Impact Statements, the State Health and Safety Code, and US Army Corps of Engineers Permit requirements for most projects. As outlined on the left panel, these services include, but are not limited to, archeological survey, site testing and mitigation, construction monitoring, archival research, and academic research capabilities. MAC also has particular expertise in the specialized sub-disciplines of Battlefield Archeology, Urban Archeology, and Underwater Archeology.

Experience

MAC has conducted nearly 700 major archeological projects, as well as many smaller desk-based investigations. These projects were conducted to support an array of public and private industry activities including highway construction, mass transit, park planning and development, energy projects, oil-spill remediation, flood control, real estate development, and industrial development. With this diverse background, MAC is able to develop customized approaches to accommodate varying client and regulatory needs.
