

TERMITICIDE CALCULATION SHEET

Treatment Site:

Owner _____

Address _____

City _____ State _____ Zip _____

Treatment Date _____

Termiticide _____ % Dilution _____

Company Name _____

Certified Applicator _____

1. FOOTING TRENCH TREATMENT

(disregard if footing poured or monolithic slab)

Length of footing trench in feet _____
 x width of footing trench in feet _____
 = Total square feet of footing trench (a) _____

Foundation pier footing trench length in feet _____
 x width of footing trench in feet _____
 = Total square feet per pier footing _____
 x number of pier footings _____
 = Total square feet of pier footings (b) _____

Total square feet of footings (add lines a and b) _____
 Square Foot Factor x 0. *
 = Total gallons for footings _____

2. SLAB FILL AREA SQUARE FOOTAGE

(disregard on existing slabs)

Slab Section A slab length in feet _____
 x slab width in feet _____
 = Total square feet of Slab Section A fill area _____

Slab Section B slab length in feet _____
 x slab width in feet _____
 = Total square feet of Slab Section B fill area _____

Slab Section C slab length in feet _____
 x slab width in feet _____
 = Total square feet of Slab Section C fill area _____

3. GALLONS FOR FILL AREA(S)

(disregard on existing slabs)

Total square feet Slab Section A _____
 Total square feet Slab Section B _____
 Total square feet Slab Section C _____
 Total square feet _____
 Square Foot Factor x 0. *
 = Total gallons for fill _____

4. CRITICAL AREAS

(plumbing and electrical lines and cracks in slab)

Total feet of critical areas _____
 Linear Foot Rate Factor x 0. *
 = Total gallons for critical areas _____

5. EXTERIOR FOUNDATIONS

Total feet around the exterior perimeter _____
 Linear Foot Rate Factor x 0. *
 = _____
 x distance in feet from grade to top of footing
 to bottom of concrete on monolithic slabs _____
 = Total gallons for exterior foundations _____

6. INTERIOR FOUNDATIONS

Total feet of interior foundation wall (a) _____
 Total feet around foundation piers
 (Measure around pier footing if exposed) (b) _____
 Total Feet (add lines a and b) _____
 Linear Foot Rate Factor x 0. *
 = _____
 x distance in feet from grade to top of footing _____
 = Total gallons for interior foundations _____

7. MASONRY VOIDS (disregard if footing trenches were pretreated or if masonry walls are constructed on slab floor)

Total feet of hollow masonry foundation walls (a) _____
 Total feet of hollow masonry foundation piers (b) _____
 Total feet of masonry voids (add lines a and b) _____
 Linear Foot Rate Factor x 0. *
 = Total gallons for hollow masonry voids _____

8. Total gallons for footing trenches _____
 Total gallons for slab fill area + _____
 Total gallons for critical areas + _____
 Total gallons for exterior foundations + _____
 Total gallons for interior foundations + _____
 Total gallons for hollow masonry voids + _____

TOTAL GALLONS FOR TREATMENT = _____

Volume Rate Factor Legend*

Volume Rate per 10 sq. ft.	Factor	Volume Rate Per 10 Lin. Ft.	Factor
1/2 gallon	0.05	1 gallon	0.10
1 gallon	0.10	2 gallons	0.20
1 1/2 gallon	0.15	4 gallons	0.40
2 gallons	0.20	8 gallons	0.80

Volume Rate Factors determined by the percent dilution applied.
 Consult label for Volume Rate required for selected use dilution %.
