Woody's Septic Tank Service

Classy Trucks | September 2013

Owner Jerry Thompson has added this 2010 International 7600 with a 4,200-gallon steel tank from Lely Manufacturing Inc. The rig is powered by an International MaxxForce II 390hp engine tied to an Allison 4000 automatic transmission, and the tank is served by a Robuschi RBDV-65 blower. For better visibility on the road, a Star 2420 SLDA Razor Light Bar was added over the cab. Tool holders are built into the rear bumper. The tank features sight glasses and polished aluminum wheels. The truck has an air-ride driver's seat. Colorful graphics were provided by Sign Power. Driver Larry Robinson uses the truck for commercial and residential septic pumping and grease trap service.
